

Modern Job Board – Feature Breakdown

A WordPress plugin (v1.2.1, last updated Dec 2025) that turns any WordPress site into a full-featured job board.

Job Management

Feature	Details
Frontend Submission Form	Employers post jobs from the frontend via [mjb_job_form] shortcode
Company Profiles	Dedicated Company custom post type (CPT) for employer profiles
Featured Listings	Jobs can be promoted/highlighted for greater visibility
Job Expiration & Cleanup	Automatic expiry logic with a WP-Cron background job to unpublish stale listings

Search & Discovery

Feature	Details
AJAX Filtering	Filter by keyword, location, job type, and category – no page reloads
Google Maps	Location displayed visually on individual job listing pages
SEO / Schema.org	Automatic JobPosting structured data for inclusion in Google for Jobs

User Roles & Dashboards

Employers

Feature	Details
Frontend Registration	Employer signup via [mjb_employer_registration] shortcode
Employer Dashboard	[mjb_dashboard] – manage job listings and view incoming applications
Email Notifications	Automatic notifications on new application receipt

Candidates

Feature	Details
Frontend Registration	Candidate signup via [mjb_candidate_registration] shortcode
Candidate Dashboard	[mjb_candidate_dashboard] – update profile, manage CV

Secure Resume Storage	Files stored in /wp-content/uploads/mjb-resumes/ – separate from public Media Library, admin-only access
Apply with Profile	Logged-in candidates apply instantly using their stored resume

Monetization (WooCommerce)

Requires WooCommerce. Three distinct revenue streams:

Model	Details
Pay-Per-Post	Employers pay for each individual job submission
Job Credits / Packages	Bulk listing packs (buy 5 posts, use them over time)
Paid CV Access	Employers unlock candidate resumes via a single unlock or a time-based pass
Lifecycle Handling	Credits and CV access are automatically revoked on order refund or cancellation

Admin Tools

Tool	Details
Custom Fields Builder	Create unlimited custom fields for Jobs or Applications via a UI – no code required
CSV Import	Bulk import job listings using a CSV template
CSV Export	Export jobs and applications for reporting/analysis
Security Hardening	index.php files in every directory to prevent directory listing

Developer / Integration Layer

Integration	Details
REST API	GET /wp-json/mjb/v1/jobs – returns JSON listings (per_page param, default 10)
XML Job Feed	/feed/job-listings – compatible with Indeed and Google Jobs aggregators
Hooks & Filters	Extensive action/filter hooks throughout shortcodes and application flows

Shortcodes Summary

Shortcode	Purpose
[mjb_jobs]	Main job listing with search/filter UI
[mjb_job_form]	Frontend job submission form
[mjb_dashboard]	Employer job & application management
[mjb_employer_registration]	Employer signup form
[mjb_candidate_registration]	Candidate signup form
[mjb_candidate_dashboard]	Candidate profile & CV management
